STANDARD PROTEOMICS WORKFLOW

MATCHING CONCEPT

SEVERAL MATCHING ALGORITHMS:

MASCOT (Perkins, Pappin et al. 1999), Protein Prospector (Clauser, Baker et al. 1999), Peptide Search (Mann and Wilm 1994), SEQUEST (Eng 1994) and OMSSA (Geer, Markey et al. 2004).

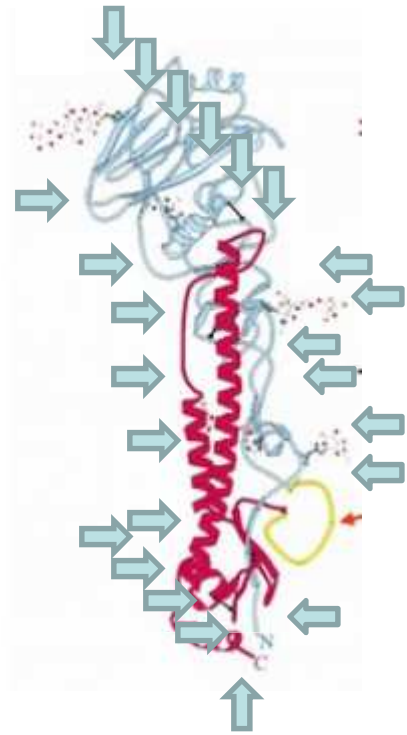

WHAT IS THE MAIN SOURCE OF PROTEOMICS DATA?

RefSeq

The database incorporates data from over 2400 organisms (6500 in 2013) and includes over one million proteins representing significant taxonomic diversity spanning prokaryotes, eukaryotes and viruses. Nucleotide and protein sequences are explicitly linked, and the sequences are linked to other resources including the NCBI Map Viewer and Gene. Sequences are annotated to include coding regions, conserved domains, variation, references, names, database cross-references, and other features

using a combined approach of collaboration and other input from the scientific community, automated annotation, propagation from GenBank and curation by NCBI staff.

EXAMPLE OF TRYPSIN CLEAVAGE?

Trypsin (R, K cleavage)

Loading Sample/Matrix on MALDI Target

Common way of loading sample & matrix on MALDI target

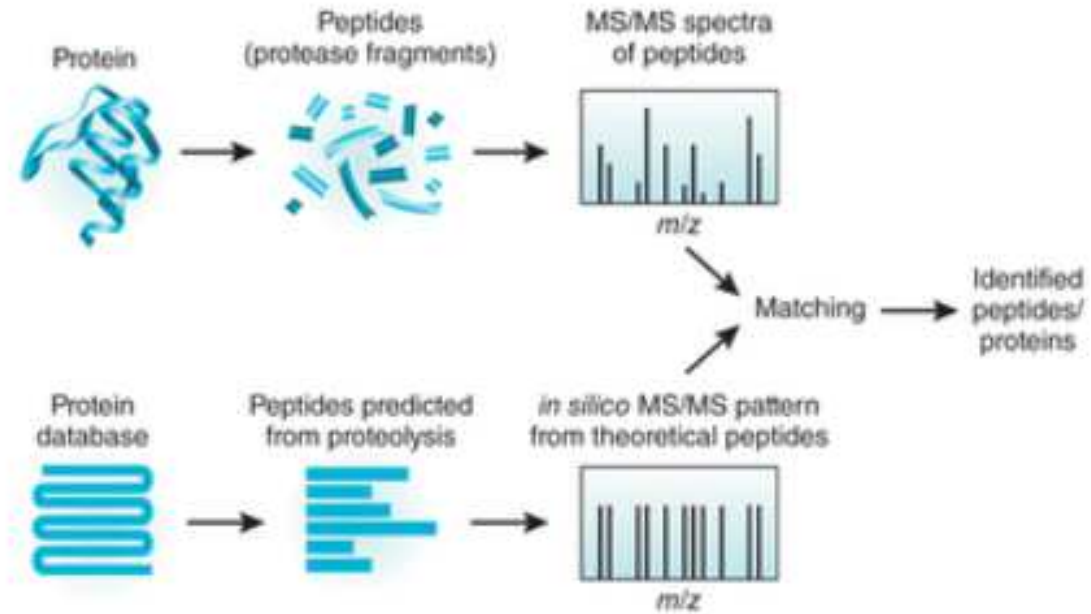

MS analysis

PRECURSOR SELECTION FROM MS DATA?

- ➡ a-ions,
- ➡ b-ions,
- c-ions,
- x-ions,
- ➡ y-ions,
- z-ions ...

MATCHING IN SILICO AND EXPERIMENTAL DATA?

Duncan, 2010, Nat. Biotech.

These were general aspects of spectra matching concept

- Is there any other concept?

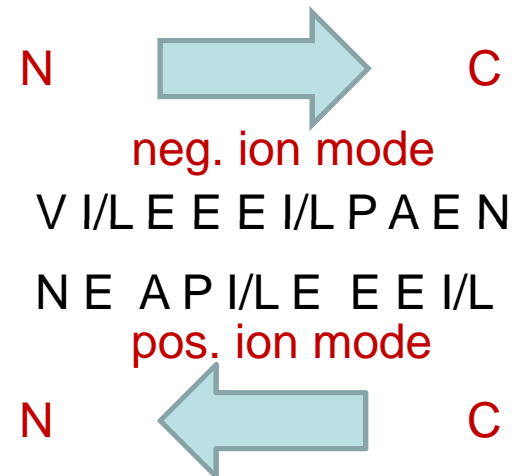

P R O T E I N
R E A D I N G

Protein reading concept:

1. Peptides MS negative ionization
2. *De novo* sequencing **in neg.** MS/MS
3. *De novo* sequencing **in pos.** MS/MS
4. Looking for overlapped readings
5. ID of the microorganisms by overlapped readings

e.g.

P R O T E I N R E A D I N G

NEGATIVE ION MODE

MS negative ion mode

POSITIVE ION MODE (QC-QUALITY CONTROL)

CAF-/CAF+ or shorter
CAF/CAF

P R O T E I N
R E A D I N G

Classical MALDI analysis

*Analysis in positive ion mode
of peptides*

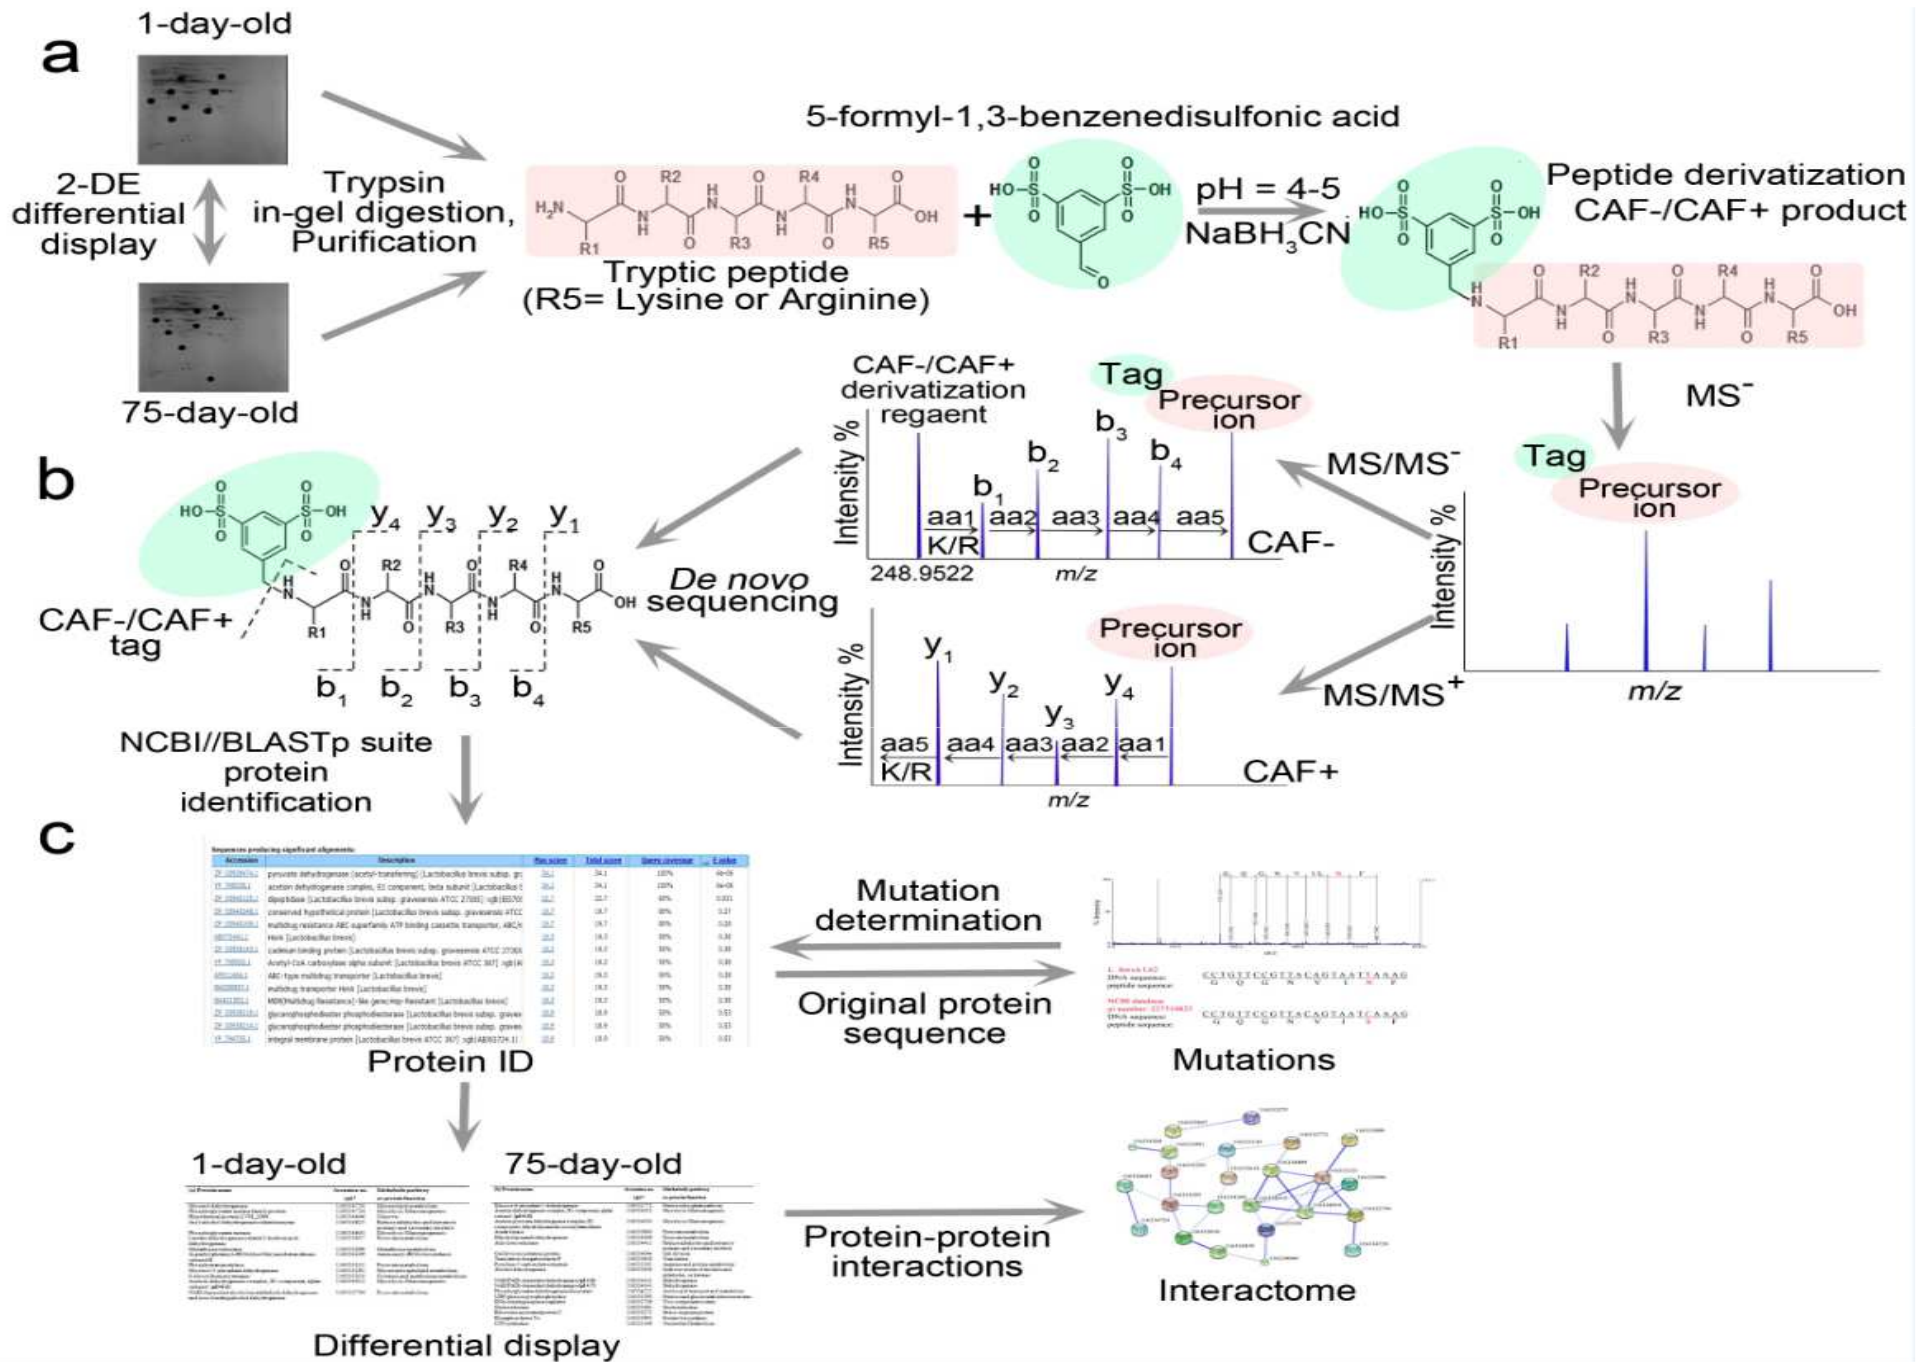

CAF/CAF MALDI analysis

*Analysis in positive and negative
ion mode of peptides
Soft derivatization*

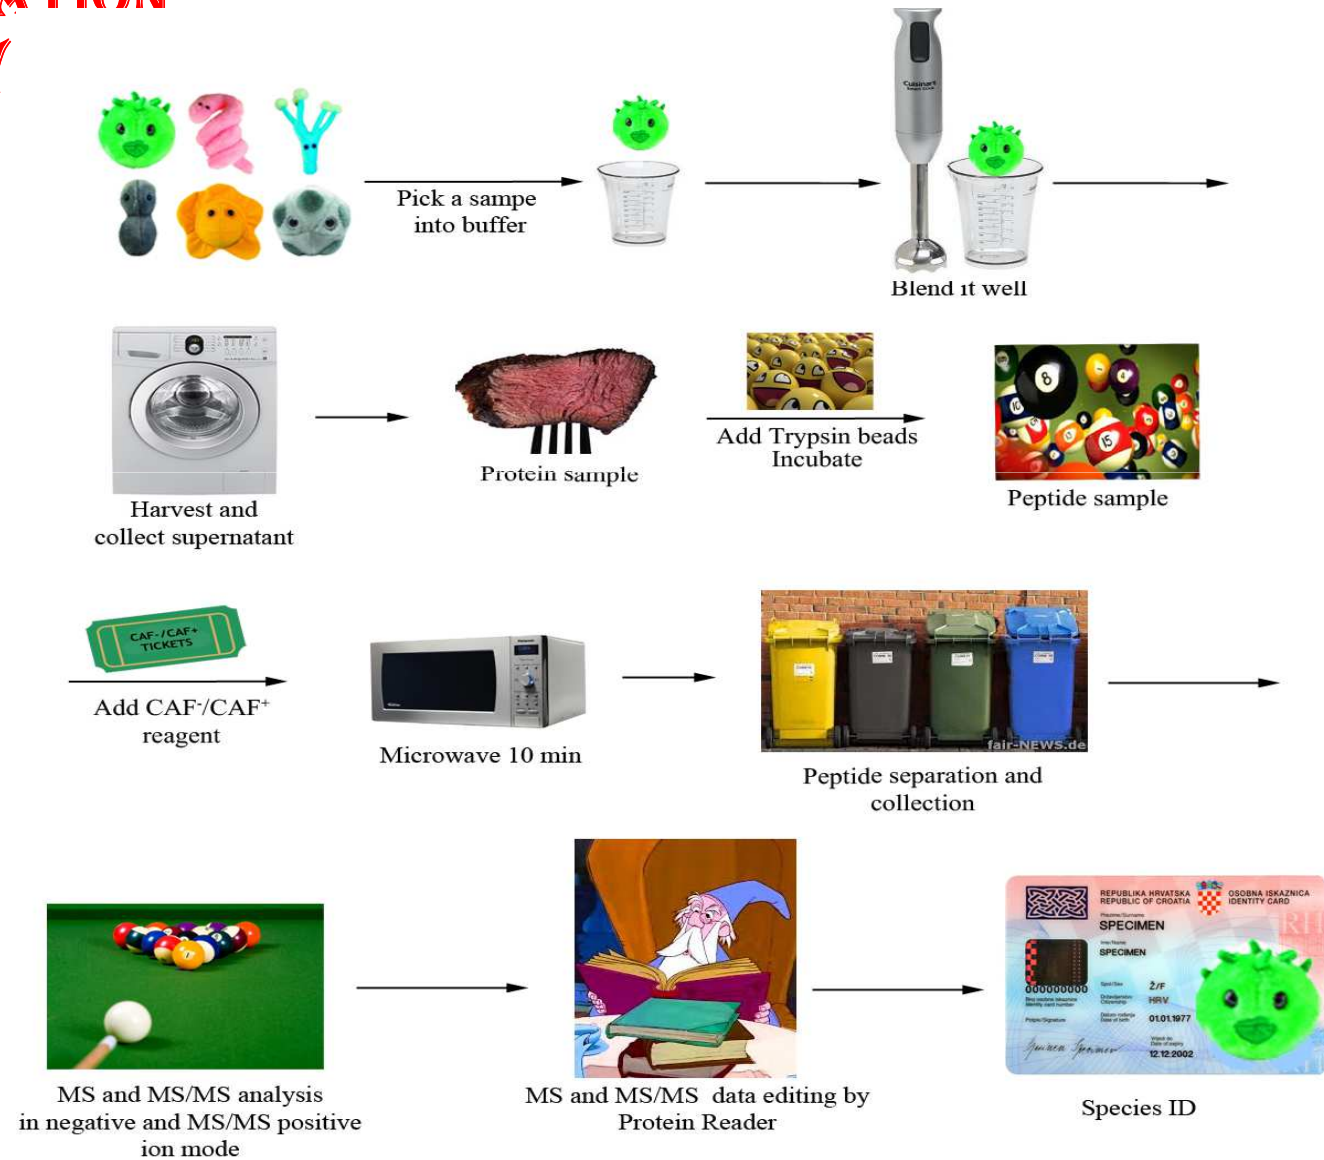

BENEFITS!!!
N-term → C-term
C-term → N-term

COMPARISON WITH OTHER MASS SPECTROMETRY BIOTYPIZATION APPROACHES

Bruker's Biotyper results

specie	strain	result	best match	score	second best match	score	positive identification
Lactobacillus plantarum	strain 7.1	(+++)(A)	Lactobacillus plantarum	2.438	Lactobacillus plantarum	2.43	+
Enterococcus faecium	strain 7.2	(++)(A)	Enterococcus faecium	2.224	Enterococcus faecium	2.221	+
Pediococcus pentosaceus	strain 2.2	(++)(A)	Pediococcus pentosaceus	2.134	Pediococcus pentosaceus	2.067	+
Lactobacillus casei	strain 16.1	(++)(A)	Lactobacillus paracasei	2.257	Lactobacillus paracasei	2.119	+
Lactobacillus fermentum	strain 8.2	(++)(A)	Lactobacillus fermentum	2.05	Lactobacillus fermentum	1.794	+
Lactobacillus fermentum	strain 10.2	(+)(B)	Lactobacillus fermentum	1.85	Lactobacillus fermentum	1.701	+/-
Lactobacillus brevis	strain 15.2	(+)(B)	Lactobacillus brevis	1.938	Lactobacillus brevis	1.892	+/-
Lactobacillus buchneri	strain 12.3	(+)(B)	Lactobacillus buchneri	1.895	Lactobacillus kefirii	1.725	+/-
Lactobacillus plantarum	strain 16.3	(+)(B)	Lactobacillus plantarum	1.97	Lactobacillus plantarum	1.849	+/-
Lactobacillus fermentum	strain 9.1	(+)(B)	Lactobacillus fermentum	1.885	Lactobacillus fermentum	1.719	+/-
Lactococcus lactis	strain 1.1	(-)(C)	7 not reliable identification	1.3837	not reliable identification	1.355	-
Lactococcus lactis	strain 6.8	(-)(C)	16 Not reliable identification	1.27216	Not reliable identification	1.234	-

legend **score**
 A - positive >2
 B - maybe 1.7 to 2
 negative result < 1,7

A - positive identification
 B - maybe positive identification
 C - not reliable identification

THE PROTEIN READER

Final result: 4 out of 12

CAF+ / CAF- results

positive identification					
Lactobacillus plantarum	+	Pediococcus pentosaceus	8 spots	5 precursors	15 read sequences
Enterococcus faecium	+	Lactobacillus brevis	8 spots	5 precursors	20 read sequences
Pediococcus pentosaceus	+	Lactobacillus casei	8 spots	5 precursors	34 read sequences
Lactobacillus casei	+	Lactobacillus plantarum	8 spots	5 precursors	17 read sequences
Lactobacillus fermentum	+	Enterococcus faecium	8 spots	5 precursors	12 read sequences
Lactobacillus fermentum	+	Lactobacillus fermentum	8 spots	5 precursors	14 read sequences
Lactobacillus brevis	+	Lactococcus lactis	8 spots	5 precursors	36 read sequences
Lactobacillus buchneri	+	Lactobacillus buchneri	8 spots	5 precursors	33 read sequences

P R O T E I N
R E A D I N G

BENEFITS

- For the first time mass spectrometry can exploit both positive and negative ion mode for protein and species identification
- Sequence reading includes only **b-ions (neg. ion mode)** and **y-ions (pos. ion mode)** making sequence reading easy and unambiguous
- Clinical application requires quality control gained by two orthogonal techniques (MS/MS neg. and pos.)
- Sample preparation is finished in **3 h** and it can be completely automatized
- Biotypization is relied on genetic sequence not on the “home made” database
- Developed software named **PROTEIN READER** exploits the benefits accomplished by CAF/CAF chemistry for fast, accurate, robust and reliable protein and species identification
